Address:
Telephone Number: Email address:
Project Status:
Monitoring Level required by COE and DWQ (404 permit/ 401 Cert.): Level 1 The permittee shall perform the following components of Level I monitoring each year for the 5-year monitoring period or through two documented bankfull flow events: Reference photos; plant survival (i.e. identify specific problem areas (missing, stressed, damaged or dead plantings), estimated causes, and proposed/required remedial action);visual inspection of channel stability. Physical measurements of channel stability/morphology will not be required. The permittee shall submit the monitoring reports to the USACE, Raleigh Regulatory Field Office Project Manager, within sixty days after completing the monitoring. If less than two bankfull events occur during the first 5 years, the permittee shall continue monitoring until the second bankfull event is documented. The bankfull events must occur during separate monitoring years. In the event that the required bankfull events do not occur during the five-year monitoring period, the USACE, in consultation with the resource agencies, may determine that further monitoring is not required. It is suggested that all bankfull occurrences be monitored and reported through the required monitoring period. The permittee shall perform and submit photo documentation twice each year (summer and winter) for the 5-year monitoring period, and for any subsequently required monitoring period.
Section 1. PHOTO REFERENCE SITES (Monitoring at all levels must complete this section) Total number of reference photo locations at this site: 8 photos were taken from 4 photo point locations.
Dates reference photos have been taken at this site: 2/23/09, 9/1/09, 3/16/10, 9/28/10, 3/2/11, 9/12/11, 1/25/12 Individual from whom additional photos can be obtained (name, address, phone):

Other Information this report.	on relative to site photo reference: A site map with photo point locations is attached to
If required to comp	lete Level 3 monitoring only stop here; otherwise, complete section 2.
Section 2. PLAN Attach plan sheet	Γ SURVIVAL indicating reference photos.
Identify specific	problem areas (missing, stressed, damaged or dead plantings):
Estimated cause	s, and proposed/required remedial action:
	COMMENTS: Planted vegetation noted included black willow, silky dogwood, sycamore, her vegetation included lespedeza, cattail, soft rush, briars, winged elm, and various grasses.
-	

If required to complete Level 1 and Level 2 monitoring only stop here; otherwise, complete section 3.

Section 3. CHANNEL STABILITY

Visual Inspection: The entire stream project as well as each in-stream structure and bank stabilization/revetment structure must be evaluated and problems addressed.

Report on the visual inspection of channel stability. <u>Physical measurements of channel stability/morphology will not be required.</u> Include a discussion of any deviations from as-built and an evaluation of the significance of these deviations and whether they are indicative of a stabilizing or destabilizing situation.

<u>UT to Dixon Branch (Site 23) stream relocation is stable for the Year 4 Winter evaluation.</u>	NCDOT	will continue to
monitor this stream relocation for channel stability.
